MATRIX LONE WORKER UNIT BENEFITS

The revolutionary new **Lone Worker Unit** allows for the worker to signal there is a problem with a single push of the emergency button. This captures the exact location of the unit from its powerful **internal GPS** receiver and sends an alert SMS message (and / or an e-mail). Other buttons can open up a **voice call** to a pre-set phone number. The device also acts as a tracking system when in its cradle in the cab of your vehicle.

- **Voice calls** can also be made to the unit from any telephone to check on the status of the lone worker.
- **Periodic positions** of the Lone Worker Unit can be captured, sent and viewed on the Web based Platform.
- **Reports indicate time worker is on site or in their vehicle.**
- **Alerts when battery is low.**

The unit is small enough to fit into a pocket and still detect GPS positions.

- NB. The service charge to cover the Lone Worker Unit usage is dependant upon application.
